INSERT SELECTION CRITERIA

The peripheral cutting speed is naturally slower towards the center of the drill and chip welding easily occurs. Below are some important information that will help to select the correct insert.

▶ STEELS AND CAST IRONS

The preferred breaker for steels and cast iron is the UM breaker. For the outer edge, use the CVD coated grade MC1020 for steel applications and the MC5020 grade for cast irons. For the inner edge, the PVD coated grade VP15TF should be used. If fracturing occurs, VP15TF should be used for both positions to provide extra stability.

▶ STAINLESS STEELS

For the best performance, use the UM breaker in the peripheral edge and the US breaker in the inner edge. The selection of grade should be the same as used for steels.

▶ HARDENED STEELS AND PREVENTING FRACTURE

For the inner edge, UH is the ideal breaker. The high-strength, negative land edge, together with the durable PVD coated carbide grade DP8020, are suitable for machining hardened steels (45HRC or lower) and preventing fracture in steels and cast irons.

▶ ALUMINUM ALLOYS PROCESSING

For both the inner and outer edges, UN breakers are ideal. The polished finish and peripheral polishing prevent welding, and the combination of the positive lands and high rake angle further enhances the sharpness.

UM BREAKER FEATURES

For General Use, Medium and High Feed Rates

- ▶ The unique wave design allows smooth chip discharge
- ▶ An ideal universal breaker for steels, stainless steels, cast irons and hardened steels

INSERT GRADES FEATURES

MC1020 is a CVD coated grade for higher cutting speeds. The main properties are high wear and high plastic deformation resistance for reliability.

MC5020 is a CVD coated grade suitable for drilling cast irons. It has excellent abrasion resistance and gives long tool life by controlling chipping and thermal cracking that can occur when drilling nodular cast irons.

VP15TF is a PVD coated grade suitable for a wide range of applications. The micro-grain substrate and Miracle coating provide excellent welding resistance.

4 CUTTING EDGES

- ▶ Economical 4-corner insert

IDEAL COMBINATION OF OUTER CVD & INNER PVD INSERT

- ▶ A highly wear resistant CVD coated insert is used for the peripheral edge and a PVD coated insert is used for the inner position for extra stability

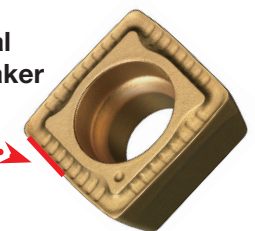

UNIQUE CHIP BREAKER DESIGN

- ▶ For a wide range of workpiece materials and applications

WIPER EDGE

- ▶ A wiper type geometry for the peripheral cutting edge achieves excellent wall accuracy

Universal UM Breaker

HIGH RIGID BODY

- ▶ Increased surface hardness prevents abrasive damage caused by chip flow
- ▶ Optimum insert position controls deformation and vibration of the holder. This enabled a maximum drilling depth of L/D=6
